Disease Control Priorities, Third Edition (Volume 2) Robert Black 2016-04-11 The evaluation of reproductive, maternal, newborn, and child health (RMNCH) by the Disease Control Priorities, Third Edition (DCP3) focuses on maternal conditions, childhood illness, and malnutrition. Specifically, the chapters address acute illness and undernutrition in children, principally under age 5. It also covers maternal mortality, morbidity, stillbirth, and influences to pregnancy and pre-pregnancy. Volume 3 focuses on developments since the publication of DCP2 and will also include the transition to older childhood, in particular, the overlap and commonality with the child development volume. The DCP3 evaluation of these conditions produced three key findings: 1. There is significant difficulty in measuring the burden of key conditions such as unintended pregnancy, unsafe abortion, nonsexually transmitted infections, infertility, and violence against women. 2. Investments in the continuum of care can have significant returns for improved and equitable access, health, poverty, and health systems. 3. There is a large difference in how RMNCH conditions affect different income groups; investments in RMNCH can lessen the disparity in terms of both health and financial risk.

Promoting Skin-to-skin Contact as a Standard of Care Valerie Call 2014 In this article, the importance of implementing skin-to-skin contact as a standard of care practice, in all labor and delivery settings, will be evaluated. Evidence indicates that complications from newborns being taken immediately to radiant warmers after birth include infant hypoglycemia, infant pulmonary distress, maternal hemorrhage, and uncontrolled maternal pain (Landis, Mueller, Curcio, and Collins, 2013). If infants are placed in skin-to-skin contact, benefits are vast. Various studies have shown that newborns who are immediately positioned skin to skin with their mothers after delivery make the transition from fetal to newborn life more easily (Phillips, 2013). Infants often experience less respiratory, temperature, and/or glucose instability. In addition, they often cry significantly less (Phillips, 2013). For this reason, the following question will be posed, "Should infants go immediately to mother's skin, or should they be taken to a radiant warmer?" This paper will review the identified problem that conflicts with the practice of skin-to-skin contact, offer a solution for the issue, review literature and evidence, which supports the proposed solution, and classify a theory that supports the solution. Furthermore, the paper will suggest a detailed implementation, evaluation, and dissemination plan for the project. The necessary steps for implementation will require postponing routine weights, measurements and medication administration, as well as performing only necessary APGAR scores with the infant remaining on the mother's chest (Semenic, Childerhose, Lauziere, and Groleau, 2012).

Skin Microbiome Handbook Nava Dayan 2020-09-01 The book provides a comprehensive detailed summary of current status on skin microbiome research in health and disease as well as key regulatory and legal aspects. In the past decade, interest and technology have greatly advanced to unravel the nature and effect of skin microbiome on our health. Diseases such as atopic dermatitis and acne are at the forefront of this research, but also other conditions such as skin cancer are under investigation. In addition, mapping of the skin microbiome has gone from basic to more detailed with attempts to correlate it to various ages, ethnicities and genders. In parallel to mapping it, a great deal of research is dedicated to understanding its functionality and communication (and hence effect) on human cells. The *Skin Microbiome Handbook* is a summary of current status of knowledge, research tools and approaches in skin microbiome, in health and disease. It contains the following categories: healthy skin microbiome and oral-skin interaction; skin microbiome observational research; skin microbiome in disequilibrium and disease; skin's innate immunity; testing and study design; regulatory and legal aspects for skin microbiome related products. Perinatal Physiology Uwe Stave 2013-06-29 Living Nature, not dull Art Shall plan my ways and rule my heart -Cardinal Newman Nature and Art 1868 One of the ineluctable consequences of growth in any field of science is that subjects of inquiry once established tend to give birth to subsubjects and that the subsubjects once established will in time undergo further mitotic division. Not so many years ago, problems surrounding the fetus and newly born infant lay in a realm almost to be described as a "no-man's land." Obstetricians properly gave major consideration to understanding and learning about processes and disorders concerned with maternal health and safety. The welfare of the infant was regarded as of secondary importance. Pediatricians on their part hesitated to invade the nursery, a sanctum regarded as belonging to the domain of the accoucheur. And the pathologist, enveloped in the mysteries of life and death in the adult, found scant time - for the neonate and the placenta.

Living Color Nina G. Jablonski 2012-09-27 Living Color is the first book to investigate the social history of skin color from prehistory to the present, showing how our body's most visible trait influences our social interactions in profound and complex ways. In a fascinating and wide-ranging discussion, Nina G. Jablonski begins with the biology and evolution of skin pigmentation, explaining how skin color changed as humans moved around the globe. She explores the relationship between melanin pigment and sunlight, and examines the consequences of rapid

migrations, vacations, and other lifestyle choices that can create mismatches between our skin color and our environment. Richly illustrated, this book explains why skin color has come to be a biological trait with great social meaning—a product of evolution perceived by culture. It considers how we form impressions of others, how we create and use stereotypes, how negative stereotypes about dark skin developed and have played out through history—including being a basis for the transatlantic slave trade. Offering examples of how attitudes about skin color differ in the U.S., Brazil, India, and South Africa, Jablonski suggests that a knowledge of the evolution and social importance of skin color can help eliminate color-based discrimination and racism.
