Stereotyping and Prejudice Charles Stangor 2013-07-24 This volume presents a contemporary and comprehensive overview of the great diversity of theoretical interests, new ideas, and practical applications that characterize social psychological approaches to stereotyping and prejudice. All the contributions are written by renowned scholars in the field, with some chapters focusing on fundamental principles, including research questions about the brain structures that help us categorize and judge others, the role of evolution in prejudice, and how prejudice relates to language, communication, and social norms. Several chapters review a new dimension that has frequently been understudied—the role of the social context in creating stereotypes and prejudice. Another set of chapters focuses on applications, particularly how stereotypes and prejudice really matter in everyday life. These chapters include studies of their impact on academic performance, their role in small group processes, and their influence on everyday social interactions. The volume provides an essential resource for students, instructors, and researchers in social and personality psychology, and is also an invaluable reference for academics and professionals in related fields who have an interest in the origins and effects of stereotyping and prejudice.

Culture, Mind, and Brain Laurence J. Kirmayer 2020-09-24 Recent neuroscience research makes it clear that human biology is cultural biology - we develop and live our lives in socially constructed worlds that vary widely in their structure values, and institutions. This integrative volume brings together interdisciplinary perspectives from the human, social, and biological sciences to explore culture, mind, and brain interactions and their impact on personal and societal issues. Contributors provide a fresh look at emerging concepts, models, and applications of the co-constitution of culture, mind, and brain. Chapters survey the latest theoretical and methodological insights alongside the challenges in this area, and describe how these new ideas are being applied in the sciences, humanities, arts, mental health, and everyday life. Readers will gain new appreciation of the ways in which our unique biology and cultural diversity shape behavior and experience, and our ongoing adaptation to a constantly changing world.

The WEIRDest People in the World Joseph Henrich 2020-09-08 A New York Times Notable Book of 2020 A Bloomberg Best Non-Fiction Book of 2020 A Behavioral Scientist Notable Book of 2020 A Human Behavior & Evolution Society Must-Read Popular Evolution Book of 2020 A bold, epic account of how the co-evolution of psychology and culture created the peculiar Western mind that has profoundly shaped the modern world. Perhaps you are WEIRD: raised in a society that is Western, Educated, Industrialized, Rich, and Democratic. If so, you're rather psychologically peculiar. Unlike much of the world today, and most people who have ever lived, WEIRD people are highly individualistic, self-obsessed, control-oriented, nonconformist, and analytical. They focus on themselves—their attributes, accomplishments, and aspirations—over their relationships and social roles. How did WEIRD populations become so psychologically distinct? What role did these psychological differences play in the industrial revolution and the global expansion of Europe during the last few centuries? In *The WEIRDest People in the World*, Joseph Henrich draws on cutting-edge research in anthropology, psychology, economics, and evolutionary biology to explore these questions and more. He illuminates the origins and evolution of family structures, marriage, and religion, and the profound impact these cultural transformations had on human psychology. Mapping these shifts through ancient history and late antiquity, Henrich reveals that the most fundamental institutions of kinship and marriage changed dramatically under pressure from the Roman Catholic Church. It was these changes that gave rise to the WEIRD psychology that would coevolve with impersonal markets, occupational specialization, and free competition—laying the foundation for the modern world. Provocative and engaging in both its broad scope and its surprising details, *The WEIRDest People in the World* explores how culture, institutions, and psychology shape one another, and explains what this means for both our most personal sense of who we are as individuals and also the large-scale social, political, and economic forces that drive human history. Includes black-and-white illustrations.

Cultural Psychology Robyn M. Holmes 2020-01-30 Cultural Psychology draws upon major psychological topics, theories, and principles to illustrate the importance of culture in psychological inquiry. Exploring how culture broadly connects to psychological processing across diverse cultural communities and settings, it highlights the applied nature of cultural psychology to everyday life events and situations, presenting culture as a complex layer in which individuals acquire skills, values, and abilities. Two central positions guide this textbook: one, that culture is a mental and physical construct that individuals live, experience, share, perform, and learn; and the second, that culture shapes growth and development. Culture-specific and cross-cultural examples highlight connections between culture and psychological phenomena. The text is multidisciplinary, highlighting different perspectives that also study how culture shapes human phenomena. Topics include an introduction to cultural psychology, the history of cultural psychology, cultural evolution and cultural ecology, methods, language and nonverbal communication, cognition, and perception. Through coverage of social behaviour, the book challenges students to explore the self, identity, and personality; social relationships, social attitudes, and intergroup contact in a global world; and social influence, aggression, violence, and war. Sections addressing growth and development include human development and its processes, transitions, and rituals across the lifespan, and socializing agents, socialization practices, and child activities. Additionally, the book features discussions of emotion and motivation, mental health and psychopathology, and future directions for cultural psychology. Chapters contain teaching and learning tools including case studies, multidisciplinary contributions, thought-provoking questions, class and experiential activities, chapter summaries, and additional print and media resources.

The Oneness Hypothesis Philip J. Ivanhoe 2018-06-26 The idea that the self is inextricably intertwined with the rest of the world—the “oneness hypothesis”—can be found in many of the world’s philosophical and religious traditions. Oneness provides ways to imagine and achieve a more expansive conception of the self as fundamentally connected with other people, creatures, and things. Such views present profound challenges to Western hyperindividualism and its excessive concern with self-interest and tendency toward self-centered behavior. This anthology presents a wide-ranging, interdisciplinary exploration of the nature and implications of the oneness hypothesis. While fundamentally inspired by East and South Asian traditions, in which such a view is often critical to their philosophical approach, this collection also draws upon religious studies, psychology, and Western philosophy, as well as sociology, evolutionary theory, and cognitive neuroscience. Contributors trace the oneness hypothesis through the works of East Asian and Western schools, including Confucianism, Mohism, Daoism, Buddhism, and Platonism and such thinkers as Zhuangzi, Kant, James, and Dewey. They intervene in debates over ethics, cultural difference, identity, group solidarity, and the positive and negative implications of metaphors of organic unity. Challenging dominant views that presume that the proper scope of the mind stops at the boundaries of skin and skull, *The Oneness Hypothesis* shows that a more relational conception of the self is not only consistent with contemporary science but has the potential to lead to greater happiness and well-being for both individuals and the larger wholes of which they are parts.

The Autobiographical Self in Time and Culture Qi Wang 2013-07-26 In this volume, Qi Wang traces the developmental, social, cultural, and historical origins of the autobiographical self - the self that is made of memories of the personal past and of the family and the community. Wang combines rigorous research, sensitive survey of real memories and memory conversations, and fascinating personal anecdotes into a state-of-the-art book. As a "marginal woman" who grew up in the East and works and lives in the West, Wang's analysis is unique, insightful, and approachable. Her accounts of her own family stories, extraordinarily careful and thorough documentation of research findings, and compelling theoretical insights together convey an unequivocal message: The autobiographical self is conditioned by one's time and culture. Beginning with a perceptive examination of the form, content, and function of parent-child conversations of personal and family stories, Wang undertakes to show how the autobiographical self is formed in and shaped by the process of family storytelling situated in specific cultural contexts. By contrasting the development of autobiographical writings in Western and Chinese literatures, Wang seeks to demonstrate the cultural stance of the autobiographical self in historical time. She examines the autobiographical self in personal time, thoughtfully analyzing the form, structure, and content of everyday memories to reveal the role of culture in modulating information processing and determining how the autobiographical self is remembered. Focusing on memories of early childhood, Wang seeks to answer the question of when the autobiographical self begins from a cross-cultural perspective. She sets out further to explore some of the most controversial issues in current psychological research of autobiographical memory, focusing particularly on issues of memory representations versus memory narratives and silence versus voice in the construction of the autobiographical self appropriate to one's cultural assumptions. She concludes with historical analyses of the influences of the larger social, political, and economic forces on the autobiographical self, and takes a forward look at the autobiographical self as a product of modern technology.

Evolution, Culture, and the Human Mind Mark Schaller 2011-03-17 An enormous amount of scientific research compels two fundamental conclusions about the human mind: The mind is the product of evolution; and the mind is shaped by culture. These two perspectives on the human mind are not incompatible, but, until recently, their compatibility has resisted rigorous scholarly inquiry. Evolutionary psychology documents many ways in

which genetic adaptations govern the operations of the human mind. But evolutionary inquiries only occasionally grapple seriously with questions about human culture and cross-cultural differences. By contrast, cultural psychology documents many ways in which thought and behavior are shaped by different cultural experiences. But cultural inquires rarely consider evolutionary processes. Even after decades of intensive research, these two perspectives on human psychology have remained largely divorced from each other. But that is now changing - and that is what this book is about. Evolution, Culture, and the Human Mind is the first scholarly book to integrate evolutionary and cultural perspectives on human psychology. The contributors include world-renowned evolutionary, cultural, social, and cognitive psychologists. These chapters reveal many novel insights linking human evolution to both human cognition and human culture - including the evolutionary origins of cross-cultural differences. The result is a stimulating introduction to an emerging integrative perspective on human nature.

The Psychological and Cultural Foundations of East Asian Cognition Julie Spencer-Rodgers 2018 The unprecedented economic growth in many East Asian societies in the few past decades have placed the region center stage, and increasing globalization have made East-West cultural understanding of even greater importance today. This book is the most comprehensive on East Asian cognition and thinking styles to date, and is the first to bring together a large body of empirical research on "naïve dialecticism" (Peng & Nisbett, 1999; Peng, Spencer-Rodgers, & Nian, 2006) and "analytic/holistic thinking" (Nisbett, 2003), theories in cultural psychology that stem from Richard Nisbett's (2003) highly influential and successful book on *The Geography of Thought: How Asians and Westerners Think Differently... and Why*. More specifically, the current book examines the psychological, philosophical, and cultural underpinnings and consequences of "dialectical thinking" (Peng & Nisbett, 1999) and cognitive holism (Nisbett, 2003) for human thought, emotion, and behaviour. Since the publication of Peng and Nisbett's (1999) seminal article, research on this topic has flourished, and East-West cultural differences have been documented in almost all aspects of the human condition and life, from the manner in which people reason and make decisions, conceptualize themselves and others, to how they cope with stress and mental illness, and interact with others, including romantic partners and social groups. Twenty-one chapters written by leading experts in psychology and related fields cover such diverse topics as cultural neuroscience and the brain, lifespan development, attitudes and group perception, romantic relationships, extracultural cognition (the adoption of foreign mind-sets and perspectives), creativity, emotion, the self-concept, racial/ethnic identity, psychopathology, and coping processes and wellbeing. This research has practical implications for business and organizational management, international relations and politics, education, and clinical and counselling psychology, and may be of particular interest to business professionals, managers in government and non-profit sectors, as well as educators and clinicians working with East Asians and Americans of East Asian descent.

Handbook of the Psychology of Religion and Spirituality, Second Edition Raymond F. Paloutzian 2014-12-19 Paloutzian (experimental and social psychology, Westmont College) and Park (psychology, U. of Connecticut) provide a 33-chapter handbook on the psychology of religion and spirituality, for social and clinical psychologists, pastoral counselors, and students and researchers in psychology and religious studies. Psychologists and a few religious studies specialists from the US and some countries in Europe address the foundations, including definitions, core issues, measurement assessment, research methods, psychodynamic psychology and religion, and evolutionary psychology as a foundation for the psychology of religion; religious and spiritual development across the lifespan; and the neural and cognitive bases of religion and connections to emotion, personality, culture, and social behavior. They discuss religious practices and rituals, conversion experiences, prayer, spiritual struggles, fundamentalism, forgiveness, values, and morality, and implications for individual and collective well-being in terms of health, mental health, coping, psychotherapy, workplace spirituality, research, terrorism, and other areas. New topics in this edition include cross-cultural issues, spiritual goals, emotional values, and mindfulness. Most chapters have been redesigned or rewritten, with 25 new and eight revised chapters. The main themes of the book are more integrated, and the introductory and concluding chapters argue that the application of religious meaning systems and the multilevel interdisciplinary paradigm can allow reconceptualization of the field and expand research. Internationalizing the Teaching of Psychology Uwe Gielen 2017-08-01 "How can psychology professors in the USA and other nations make their courses more international?" This question is addressed in this indispensable new sourcebook, co-authored by 73 contributors and editors from 21 countries. In recent decades psychology has evolved from an American-dominated discipline to a much more global discipline. Preliminary estimates by Zoma and Gielen (2015) suggest that approximately 76%-78% of the world's one million or so psychologists reside outside the U.S. However, most textbooks in the field continue to rely predominantly on research conducted in North America and Europe. Our book is intended to introduce psychology instructors to a variety of broad perspectives as well as specific suggestions that can support their efforts to internationalize their course offerings at both the undergraduate and graduate levels. In this way they can prepare their students to become more culturally sensitive and function more effectively as citizens and psychologists in the evolving globalized world. To achieve these ambitious goals the editors have assembled an international group of 73 distinguished contributors who, taken together, have taught and conducted research in all regions of the world. The chapters in the book include both core areas of psychology and subdisciplines that represent rapidly expanding and internationally important areas such as cross-cultural psychology and the psychology of gender. The chapters cover key topics and areas included in the course offerings of psychology departments both in the United States and in other countries. In addition to a discussion of international perspectives relevant to a given area, all chapters include an annotated bibliography of pertinent books, articles, web-related materials, films, videos, and so on. Based on this information, both highly experienced and less experienced psychology

instructors can add globally and culturally oriented dimensions to their respective courses. This is important because universities, departments, and accrediting agencies increasingly put pressure on instructors to broaden and internationalize their courses. "As a long-time international psychologist myself, I see this bold new volume as a great leap forward for international psychology. The 73 distinguished contributors and editors from 21 countries have carefully crafted a handbook that will be the go-to resource on the topic for years to come. For psychology to continue to be relevant in the 21st century it must become more international; I am grateful this book will help us accomplish this challenging but rewarding goal." - Philip G. Zimbardo, Ph.D Past-President American Psychological Association "What could be more important than understanding human behavior and the thoughts and emotions that underlie it? By teaching psychology to the world, we offer the possibility of using our discipline to create a better future for all of us. The chapters in this excellent book help teachers of psychology move from an ethnocentric perspective to a global way of thinking about and telling about a truly international psychology." - Diane F. Halpern, Ph.D Past-President of the American Psychological Association and Professor of Psychology "This is a brilliant, unprecedented collection of international scholarship that every psychology professor and student should read. The 21st century in the teaching of psychology has truly arrived with this book, creating a thoroughly needed international focus for our pedagogy." - Frank Farley, Ph.D, L. H. Carnell Professor, Temple University; Former President, American Psychological Association (APA), International Council of Psychologists, American Educational Research Association (AERA), and the Society for International Psychology (Division 52 of APA) "Internationalizing Teaching of Psychology contains chapters authored by eminent psychologists of diverse cultural background, inclusive of different cultural perspectives on range of topics of contemporary importance. Thus, the volume integrates research emanating from varied cultural contexts facilitating development of a truly universal psychological science. The volume is a major resource for teaching courses on Cultural/Cross-cultural /Global psychology and in enhancing internationalization of psychology." - Prof. Janak Pandey, University of Allahabad, India, Editor, Psychology in India: The State-of-the-Art "All involved in the training of psychologists will want to recommend this book, which thoroughly presents an international perspective on the teaching of psychology. Rich, Gielen and Takooshian consider the basic nature of psychology, at the same time emphasizing cultural differences and relating it all to real life. As expert, cross-cultural researchers, the contributors provide a much needed resource and up-to-date reference for psychologists and students, as well as for any scholar interested in our discipline around the globe." - Laura Hernández-Guzmán, Ph. D. Professor of Psychology, Universidad Nacional Autónoma de México, Past-President of the Mexican Psychological Society "Since the mid-twentieth century the world has become an increasingly smaller place, at least in the figurative sense. And yet, Western psychology has been slow to grasp the culturally limited scope of much of our science. Although the movement toward a more culturally inclusive psychology had its roots at least as early as the 1960s, more recent meta-analyses have shown that a large percentage of the psychological literature has represented a small percentage of the world's population. In Internationalizing the Teaching of Psychology, Grant Rich, Uwe Gielen, and Harold Takooshian are making a noteworthy effort to inform and support teachers who would move the field toward a psychology of all people. From advice about getting involved in international psychology, to stand-alone international psychology courses, to the problems of culture-bound specialized courses, these well-traveled and experienced editors have assembled a resource that psychology teachers will find both interesting and valuable." - Kenneth D. Keith, President, Society for the Teaching of Psychology, University of San Diego "This volume is a positive contribution to the internationalization of the psychology curriculum. Given the very large numbers of psychology undergraduate and graduate students across the world, such internationalization has significant potential to provide learners with opportunities to better understand the similarities and differences in the behavior of humans in different local, national and international contexts. Such understanding can lead to a greater appreciation of, and perhaps respect for and celebration of, these similarities and differences, thus potentially leading to actions that reduce global human suffering. This volume should become an indispensable tool for psychology educators interested in such outcomes." - Jacquelyn Cranney, Psychology, UNSW Sydney, Australia "This book is a necessity, given the increasing mobility of psychologists, use of technology in psychology practice, and need to regulate the psychology profession globally. The content in this book will go a long way to improve psychological literacy in our East and Central Africa region. I chaired the first ever East and Central African Regional Psychology Conference in Uganda in 2013 and am on the Board of Directors of the International Association of Applied Psychologists (IAAP), so am keenly aware that the internationalization of scientific psychology knowledge and skills is an imperative." - James Kagaari, Ph.D, President, Uganda Council of Psychologists "Teaching psychology in your own country—especially when it is a country as vast and diverse as the United States, where fewer than half its citizens hold a passport—makes it all too easy to give courses in which students come away with the impression that what psychological scientists have learned about behavior and mental processes at home applies equally in the rest of the world. That is not always the case, of course, and the chapters in this valuable volume serve not only to remind us of that fact, but to stimulate us to consider adjusting the content of our courses to make them, as they should be, more international in scope." - Douglas Bernstein, Courtesy Professor of Psychology, University of South Florida USA "Bravo to this all-star cast of international contributors for showing us how to help students appreciate both our cultural diversity and our human kinship—and for providing us with accessible articles, books, media, and online materials for teaching every area of psychology from a more international perspective." - David G. Myers, Hope College, co-author, Psychology 12th Edition and Social Psychology, 12th Edition "Imagine that you convened an invitation-only panel of 73 experts from around the world and asked that they guide the profession in internationalizing the teaching of psychology. This book would be the impressive result! Here's the definitive, how-to guide on adding global and cross-cultural perspectives to courses throughout the psychology curricula." - John C. Norcross, Ph.D, ABPP, Distinguished Professor of Psychology at University of Scranton, Adjunct Professor of Psychiatry at SUNY Upstate Medical University "In today's increasingly interconnected world, the ever-emerging importance and impact of integrating psychology into education is powerfully presented in this book. The editors—themselves outstanding experts in the field—have assembled an exceptionally impressive collection of 28 chapters by 73 expert contributors covering varied aspects of teaching psychology from an international and multicultural perspective. Educators, students, psychologists, as well as stakeholders in related disciplines will find the theories and practical guides as essential and useful resources." - Judy Kiriakos, PhD, United Nations NGO representative, the International Association of Applied Psychology, Department of Psychology, Columbia University Teachers College
