Event Impact Assessment Donald Getz 2019 Impact assessment can be highly technical and complex, requiring a broad knowledge base and diverse skills, but like evaluation, it is a process fraught with philosophical, technical and political perils. Why is it done, by whom, and how, must be carefully planned. Impacts cannot always be 'proven', so the nature of evidence becomes critical. Accordingly, a strong theoretical base is needed by all IA practitioners. Whilst economic impacts have received a great deal of attention, with sufficient material available to guide all applications, for social, cultural and environmental IA the theory and practice has lagged. In the context of Triple Bottom Line, social responsibility and sustainability approaches most of the available literature is on normative goals (such as going green, meeting sustainability standards), the nature of positive and negative impacts (a descriptive approach or based on public input), or theory about how impacts occur; very little theory development or praxis has been directed at impact assessment for these applied fields. In response to this lack of information, Event Impact Assessment is the first text to: * Develop professionalism for IA and evaluation in these applied management fields.* Position impact assessment within sustainability and responsibility paradigms.* Recommend goals, methods and measures for planning, evaluation and

impact assessment pertaining to events and tourism.* Encourage the adoption of standard methods and key performance indicators in evaluation and impact assessment in order to facilitate valid comparisons, benchmarking, reliable forecasts, transparency and accountability.* Provide concepts and models that can be adapted to diverse situations.* Connect readers to the research literature through use of Research Notes and provision of additional readings.This text also works well as a companion text to Event Evaluation: Theory and methods for event management and tourism. The Events Management Theory and Methods Series examines the extent to which mainstream theory is being employed to develop event-specific theory, and to influence the very core practices of event management and event tourism. Each compact volume contains overviews of mainstream management theories and methods, examples from the events literature, case studies, and guidance on all aspects of planned-event management. They introduce the theory, show how it is being used in the events sector through a literature review, incorporate examples and case studies written by researchers and/or practitioners, and contain methods that can be used effectively in the real world. Series editor: Donald Getz.With online resource material, this mix-and-match collection is ideal for lecturers who need theoretical foundations and case studies for their classes, by students in need of reference works, by professionals wanting increased understanding alongside practical methods, and by agencies or associations that want their members and stakeholders to have access to a library of valuable resources.

Therefore, destinations compete fiercely not only to host these events but also to offer quality events. Student readers will find this systematic approach invaluable when placing aviation within the wider tourism context, drawing upon the disciplines of economics and marketing." Brian King, Professor of Tourism and Associate Dean, School of Hotel and Tourism Management, The Hong Kong Polytechnic University, Hong Kong "The remarkable growth in international tourism over the last century has been directly influenced by technological, and operational innovations in the airline sector which continue to define the nature, scale and direction of tourist flows and consequential tourism development. Key factors in this relationship between tourism and the airline sector are marketing and economics, both of which are fundamental to the success of tourism in general and airlines in particular, not least given the increasing significance of low-cost airline operations. Hence, uniquely drawing together these three themes, this book provides a valuable introduction to the marketing and economics of tourism with a specific focus on airline operations, and should be considered essential reading for future managers in the tourism

sector." Summaries, questions and topics for discussion in each chapter make it a useful basis for both taught courses or self-education." Rodolfo Baggio, Professor of Tourism and Social Dynamics, Bocconi University, Milan, Italy "This is a very useful introductory book that summarises a wealth of knowledge in an accessible format.
