**Girls with Razor Hearts** Suzanne Young 2020-03-17 It's time to fight back in this second novel in a thrilling, subversive near future series from New York Times bestselling author Suzanne Young about a girls-only private high school that is far more than it appears to be. Make me a girl with a razor heart! It's been weeks since Mena and the other girls of Innovations Academy escaped their elite boarding school. Although traumatized by the violence and experimentations that occurred there, Mena quickly discovers that the outside world can be just as unwelcoming and cruel. With no one else to turn to, the girls only have each other—and the revenge-fueled desire to shut down the corporation that imprisoned

them. The girls enroll in Ridgeview Prep, a private school with suspect connections to Innovations, to identify the son of an investor and take down the corporation from the inside. But with pressure from Leandra, who revealed herself to be a double-agent, and Winston Weeks, an academy investor gone rogue, Mena wonders if she and her friends are simply trading one form of control for another. Not to mention the woman who is quite literally invading Mena's thoughts—a woman with extreme ideas that both frighten and intrigue Mena. And as the girls fight for freedom from their past—and freedom for the girls still at Innovations—they must also face new questions about their existence—and what it means to be girls with razor hearts.

The Pragmatic Programmer Andrew Hunt 1999-10-20 What others in the trenches say about The Pragmatic Programmer... "The cool thing about this book is that it's great for keeping the programming process fresh. The book helps you to continue to grow and clearly comes from people who have been there." "Kent Beck, author of Extreme Programming Explained: Embrace Change "I found this book to be a great mix of solid advice and wonderful analogies!" "Martin Fowler, author of Refactoring and UML Distilled "I would buy a copy, read it twice, then tell all my colleagues to run out and grab a copy. This is a book I would never loan because I would worry about it being lost." "Kevin Ruland, Management Science, MSG-Logistics "The wisdom and practical experience of the authors is obvious. The topics presented are relevant and useful.... By far its greatest strength for me has been the outstanding analogies—tracer bullets, broken windows, and the fabulous helicopter-based explanation of the need for orthogonality, especially in a crisis situation. I have little doubt that this book will eventually become an excellent source of useful information for journeymen programmers and expert mentors alike." "John Lakos, author of Large-Scale C++ Software Design "This is the sort of book I will buy a dozen copies of when it comes out so I can give it to my clients." "Eric Vought, Software Engineer "Most modern books on software development fail to cover the basics of what makes a great software developer, instead spending their time on syntax or technology where in reality the greatest leverage possible for any software team is in having talented developers who really know their craft well. An excellent book." "Pete McBreen, Independent Consultant "Since reading this book, I have implemented many of the practical suggestions and tips it contains. Across the board, they have saved my company time and money while helping me get my job done quicker! This should be a desktop reference for everyone who works with code for a living." "Jared Richardson, Senior Software Developer, iRenaissance, Inc. "I would like to see this issued to every new employee at my company...." "Chris Cleeland, Senior Software Engineer, Object Computing, Inc. "If I'm putting together a project, it's the authors of this book that I want. . . . And failing that I'd settle for people who've read their book." "Ward Cunningham

Feedback Control Theory John C. Doyle 2013-04-09 An excellent introduction to feedback control system design, this book offers a theoretical approach that captures the essential issues and can be

applied to a wide range of practical problems. Its explorations of recent developments in the field emphasize the relationship of new procedures to classical control theory, with a focus on single input and output systems that keeps concepts accessible to students with limited backgrounds. The text is geared toward a single-semester senior course or a graduate-level class for students of electrical engineering. The opening chapters constitute a basic treatment of feedback design. Topics include a detailed formulation of the control design program, the fundamental issue of performance/stability robustness tradeoff, and the graphical design technique of loopshaping. Subsequent chapters extend the discussion of the loopshaping technique and connect it with notions of optimality. Concluding chapters examine controller design via optimization, offering a mathematical approach that is useful for multivariable systems.

Better, Simpler Strategy Felix Oberholzer-Gee 2021-04-20 Named one of the best strategy books of 2021 by strategy+business Get to better, more effective strategy. In nearly every business segment and corner of the world economy, the most successful companies dramatically outperform their rivals. What is their secret? In Better, Simpler Strategy, Harvard Business School professor Felix Oberholzer-Gee shows how these companies achieve more by doing less. At a time when rapid technological change and global competition conspire to upend traditional ways of doing business, these companies pursue radically simplified strategies. At a time when many managers struggle not to drown in vast seas of

projects and initiatives, these businesses follow simple rules that help them select the few ideas that truly make a difference. *Better, Simpler Strategy* provides readers with a simple tool, the value stick, which every organization can use to make its strategy more effective and easier to execute. Based on proven financial mechanics, the value stick helps executives decide where to focus their attention and how to deepen the competitive advantage of their business. How does the value stick work? It provides a way of measuring the two fundamental forces that lead to value creation and increased financial success—the customer's willingness-to-pay and the employee's willingness-to-sell their services to the business. Companies that win, Oberholzer-Gee shows, create value for customers by raising their willingness-to-pay, and they provide value for talent by lowering their willingness-to-sell. The approach, proven in practice, is entirely data driven and uniquely suited to be cascaded throughout the organization. With many useful visuals and examples across industries and geographies, *Better, Simpler Strategy* explains how these two key measures enable firms to gauge and improve their strategies and operations. Based on the author's sought-after strategy course, this book is your must-have guide for making better strategic decisions.

The sharpest, clearest-eyed take on our #MeToo reckoning yet. Plus: enthralling." "Megan Abbott, Edgar Award-winning author of *Dare Me* and *The Fever* Following up on her acclaimed and wildly successful New York Times bestseller *Lady in the Lake*, Laura Lippman returns with a dark, complex tale of psychological suspense with echoes of *Misery* involving a novelist, incapacitated by injury, who is plagued by mysterious phone calls. Aubrey, the title character of Gerry Andersen's most successful novel, *Dream Girl*, is so captivating that Gerry's readers insist she's real. Gerry knows she exists only in his imagination. So how can Aubrey be calling Gerry, bed-bound since a freak fall? A virtual prisoner in his penthouse, Gerry is dependent on two women he barely knows: his incurious young assistant, and a dull, slow-witted night nurse. Could the cryptic caller be one of his three ex-wives playing a vindictive trick after all these years? Or is she Margot, an ex-girlfriend who keeps trying to insinuate her way back into Gerry's life? And why does no one believe that the call even happened? Isolated from the world, drowsy from medication, Gerry slips between reality and dreamlike memories: his faithless

father, his devoted mother; the women who loved him, the women he loved. Now here is Aubrey, threatening to visit him, suggesting that Gerry owes her something. Is the threat real or a sign of dementia? Which scenario would he prefer? Gerry has never been so alone, so confused – and so terrified. And then he wakes up to another nightmare—a woman’s dead body next to his bed—and the terrifying uncertainty of whether he is responsible.

The Art and Science of Expert Witness Testimony Karen Postal 2021-09-14 Featuring in-depth interviews of attorneys, judges, and seasoned forensic experts from multiple disciplines including psychology, medicine, economics, history, and neuropsychology, *The Art and Science of Expert Witness Testimony* highlights and offers bridges for the areas where the needs and expectations of the courtroom collide with experts’ communication habits developed over years of academic and professional training. Rather than seeing testimony as a one-way download from expert to jurors, *The Art and Science of Expert Witness Testimony* focuses on the direct, dynamic, unique communication relationship that develops as each juror’s lived experience interacts with the words of experts on the stand. This book expands the academic tradition of "methods-centered credibility" to also include "person-centered credibility," where warmth, confidence, and relentless attention to detail build trust with jurors. Seasoned forensic experts share what they actually say on the stand: their best strategies and techniques for disrupting traditional academic communication and creating access to science and professional opinions with vivid, clear language and strong visuals. The difficult but necessary emotional work of the courtroom is addressed with specific techniques to regulate emotions in order to maintain person-centered credibility and keep the needs of jurors front and center through cross-examination. This innovative compilation of research is essential reading for professionals and practitioners, such as physicians, engineers, accountants, and scientists, that may find themselves experts in a courtroom. *The Art and Science of Expert Witness Testimony* provides a unique experience for readers, akin to being personally mentored by over eighty-five attorneys, judges, and seasoned experts as they share their observations, insights, and strategies—not to "win" as a defense, prosecution, or plaintiff expert, but to be productive in helping jurors and other triers of fact do their difficult intellectual job in deciding a case.

Make It Stick Peter C. Brown 2014-04-14 Discusses the best methods of learning, describing how rereading and rote repetition are counterproductive and how such techniques as self-testing, spaced retrieval, and finding additional layers of information in new material can enhance learning.

The Hockey Stick and the Climate Wars Michael E. Mann 2013-10-01 The ongoing assault on climate science in the United States has never been more aggressive, more blatant, or more widely publicized than in the case of the Hockey Stick graph—a clear and compelling visual presentation of scientific data, put together by Michael E. Mann and his colleagues, demonstrating that global temperatures have risen in conjunction with the increase in industrialization and the use of fossil fuels. Here was an easy-to-understand graph that, in a glance, posed a threat to major corporate energy interests and those who do their political bidding. The stakes were simply too high to ignore the Hockey Stick—and so began a relentless attack on a body of science and on the investigators whose work formed its scientific basis. The Hockey Stick achieved prominence in a 2001 UN report on climate change and quickly became a central icon in the “climate wars.” The real issue has never been the graph’s data but rather its implied threat to those who oppose governmental regulation and other restraints to protect the environment and planet. Mann, lead author of the original paper in which the Hockey Stick first appeared, shares the story of the science and politics behind this controversy. He reveals key figures in the oil and energy industries and the media front groups who do their bidding in sometimes slick, sometimes bare-knuckled ways. Mann concludes with the real story of the 2009 “Climategate” scandal, in which climate scientists’ emails were hacked. This is essential reading for all who care about our planet’s health and our own well-being.

It's an invaluable tool for any manager at any level." -- John L. Rice, Vice President Human Resources, Tyco International "Carrots and Sticks Don't Work provides a commonsense approach to employee engagement. Dr. Marciano provides great real-world insights, data, and practical examples to truly bring the RESPECT model to life." -- Renee Selman, President, Catalina Health Resources "The RESPECT model is one of the most dynamic, engaging, and thought-provoking employee engagement tools that I have seen. Dr. Marciano's work will help you provide meaningful long-term benefits for your employees, for your organization, and for yourself." -- Andy Brantley, President and CEO, College and University Professional Association for Human Resources "This book provides clear advice and instruction on how to engage your team members and inspire them to a higher level of productivity, work satisfaction, and enjoyment. I am already utilizing its techniques and finding immediate positive changes." -- Robert Roth, Director, Accounting and Reporting, Colgate Palmolive Company The title says it all: Carrots and Sticks Don't Work. Reward and recognition programs can be costly and inefficient, and they primarily reward employees who are already highly engaged and productive performers. Worse still, these programs actually decrease employee motivation because they can make individual recognition, rather than the overall success of the team, the goal. Yet many businesses turn to these measures first—unaware of a better alternative. So, when it comes to changing your organizational culture, carrots and sticks don't work! What does work is Dr. Paul Marciano's acclaimed RESPECT model, which gives you specific, low-cost, turnkey solutions and action plans-- based on seven key drivers of employee engagement that are proven and supported by decades of research and practice—that will empower you to assess, troubleshoot, and resolve engagement issues in the workplace: Recognition and acknowledgment of employees' contributions Empowerment via tools, resources, and information that set employees up to succeed Supportive feedback through ongoing performance coaching and mentoring Partnering to encourage and foster collaborative working relationships Expectations that set clear, challenging, and attainable performance goals Consideration that lets employees know that they are cared about Trust in your employees' abilities, skills, and judgment Carrots and Sticks Don't Work delivers the same proven resources and techniques that have enabled trainers, executives, managers, and owners at operations ranging from branches of the United States government to Fortune 500 corporations to twenty-person outfits to realize demonstrable gains in employee productivity and job satisfaction. When you give a little RESPECT you get a more effective organization, with reduced turnover and absenteeism and employees at all levels who are engaged, focused, and committed to succeed as a team. In short, you get maximum ROI from your organization's most powerful resource: its people!

The work might be best summed up as being a clinical neuropsychology postdoctoral residency in a book, with the most up to date information available, so that it is also an indispensable book for practicing neuropsychologists in addition to students and residents...There is really no book like this available today. It skillfully brings together the most important foundations of clinical neuropsychology with the 'nuts and bolts' of every facet of assessment. It also reminds the more weathered neuropsychologists among us of the essential value of neuropsychological assessment...the impact of the disease on the patient's cognitive functioning and behavior may only be objectively quantified through a neuropsychological assessment." Drive Daniel H. Pink 2011-04-05 The New York Times bestseller that gives readers a paradigm-shattering new way to think about motivation from the author of *When: The Scientific Secrets of Perfect Timing* Most people believe that the best way to motivate is with rewards like money—the carrot-and-stick approach. That's a mistake, says Daniel H. Pink (author of *To Sell Is Human: The Surprising Truth About Motivating Others*). In this provocative and persuasive new book, he asserts that the secret to high performance and satisfaction—at work, at school, and at home—is the deeply human need to direct our own lives, to learn and create new things, and to do better by ourselves and our world. Drawing on four decades of scientific research on human motivation, Pink exposes the mismatch between what science knows and what business does—and how that affects every aspect of life. He examines the three elements of true motivation—autonomy, mastery, and purpose—and offers smart and surprising techniques for putting these into action in a unique book that will change how we think and transform how we live.

*Girls with Rebel Souls* Suzanne Young 2021-03-23 Mena and the girls of Innovations Academy fight back against the men that hunt them and the woman who created them, but the discovery of a kill switch raises the stakes higher than they ever imagined.

*Testimony That Sticks* Karen Postal 2019-02-18 Following on the success of *Feedback That Sticks* (Oxford, 2013), Karen Postal demonstrates, through the words of forensic experts, how to translate complex, highly technical neuropsychological and psychological information for jurors in a way that is engaging, understandable, and (to quote Faulkner) sets the truth on fire. *Testimony That Sticks* shares the fruits of four years of in-depth interviews with over 70 seasoned forensic neuropsychologists and psychologists, as well as attorneys and judges, presenting what experts actually say on the stand: how they use compelling analogies, metaphors, and succinct explanations of assessment processes and findings, as well as principles of productive expert testimony for direct and cross examination. This book allows readers to be a fly on the wall as seasoned forensic neuropsychologists and psychologists share what they actually say on the stand: their best strategies and techniques for communicating science to juries and other triers of fact. Readers also have access to the thoughts of attorneys and judges as they watch expert testimony and weigh in on what works and doesn't, and what they need from the forensic neuropsychology and psychology professions to create more productive testimony. At its heart, the book shows how academics can shed their academic communication style learned in years of scientific training that results in the inability to communicate clearly and simply about psychology and neuroscience. This landmark book is about shedding jargon, giving academics permission to allow emotion to creep back into their language, freeing up body language, and using vivid, clear, language to

create moments of genuine, productive communication with jurors and other triers of fact.

Made to Stick Chip Heath 2007-01-02 NEW YORK TIMES BESTSELLER "The instant classic about why some ideas thrive, why others die, and how to make your ideas stick. "Anyone interested in influencing others—to buy, to vote, to learn, to diet, to give to charity or to start a revolution—can learn from this book." "The Washington Post Mark Twain once observed, "A lie can get halfway around the world before the truth can even get its boots on." His observation rings true: Urban legends, conspiracy theories, and bogus news stories circulate effortlessly. Meanwhile, people with important ideas—entrepreneurs, teachers, politicians, and journalists—struggle to make them "stick." In Made to Stick, Chip and Dan Heath reveal the anatomy of ideas that stick and explain ways to make ideas stickier, such as applying the human scale principle, using the Velcro Theory of Memory, and creating curiosity gaps. Along the way, we discover that sticky messages of all kinds—from the infamous "kidney theft ring" hoax to a coach's lessons on sportsmanship to a vision for a new product at Sony—draw their power from the same six traits. Made to Stick will transform the way you communicate. It's a fast-paced tour of success stories (and failures): the Nobel Prize-winning scientist who drank a glass of bacteria to prove a point about stomach ulcers; the charities who make use of the Mother Teresa Effect; the elementary-school teacher whose simulation actually prevented racial prejudice. Provocative, eye-opening, and often surprisingly funny, Made to Stick shows us the vital principles of winning ideas—and tells us how we can apply these rules to making our own messages stick.

Range David Epstein 2021-04-27 The #1 New York Times bestseller that has all America talking—with a new afterword on expanding your range—as seen on CNN's Fareed Zakaria GPS, Morning Joe, CBS This Morning, and more. "The most important business—and parenting—book of the year." "Forbes "Urgent and important. . . an essential read for bosses, parents, coaches, and anyone who cares about improving performance." "Daniel H. Pink Shortlisted for the Financial Times/McKinsey Business Book of the Year Award Plenty of experts argue that anyone who wants to develop a skill, play an instrument, or lead their field should start early, focus intensely, and rack up as many hours of deliberate practice as possible. If you dabble or delay, you'll never catch up to the people who got a head start. But a closer look at research on the world's top performers, from professional athletes to Nobel laureates, shows that early specialization is the exception, not the rule. David Epstein examined the world's most successful athletes, artists, musicians, inventors, forecasters and scientists. He discovered that in most fields—especially those that are complex and unpredictable—generalists, not specialists, are primed to excel. Generalists often find their path late, and they juggle many interests rather than focusing on one. They're also more creative, more agile, and able to make connections their more specialized peers can't see. Provocative, rigorous, and engrossing, Range makes a compelling case for actively cultivating inefficiency. Failing a test is the best way to learn. Frequent quitters end up with the most fulfilling careers. The most impactful inventors cross domains rather than deepening their knowledge in a single area. As experts silo themselves further while computers master more of the skills once reserved for highly focused humans, people who think broadly and embrace diverse experiences and perspectives will increasingly thrive.

Carrots, Sticks and Sermons John McCormick 2017-07-28 The literature on policy strategies, instruments, and styles is impressive. Still, a complex variety of theoretical and conceptual approaches and analytical tools hamper a good overview. Carrots, Sticks, and Sermons proposes such a framework for the field and clearly shows how public policy instruments are classified, packaged, and chosen, while highlighting the role evaluation plays in the instruments-choice process. Carrots, Sticks, and Sermons offers a comprehensive analysis of categories and typologies of policy instruments. It classifies sticks, carrots, and sermons - or, more specifically, regulation, economic means, and information. Readers are offered a comparative perspective of evaluation practice in foreign contexts. Special attention is paid to the examples of Sweden, the Netherlands, Belgium, England, Canada, the United States, and the Republic of Korea. As such, this volume crosses language barriers that stand in the way of dispersing research results among the international community of theoreticians and

practitioners. As nations become increasingly interdependent, problems of implementation and evaluation of policy choices will become issues of increasing gravity. *Carrots, Sticks, and Sermons* provides insights into the traditional and current practice of policy and program evaluation in various contexts. The book's theory of comparative public policy will produce understanding and guidance in designing better policies. It will be of wide interest to those in the fields of public policy, particularly policy design, policy implementation, policy evaluation, comparative politics, and economics.

Exercised Daniel Lieberman 2021-01-05 The book tells the story of how we never evolved to exercise - to do voluntary physical activity for the sake of health. Using his own research and experiences throughout the world, the author recounts how and why humans evolved to walk, run, dig, and do other necessary and rewarding physical activities while avoiding needless exertion. Drawing on insights from biology and anthropology, the author suggests how we can make exercise more enjoyable, rather than shaming and blaming people for avoiding it
