Batch Normalization: Accelerating Deep Network Training by ...

Web2010)  $\text{ReLU}(x) = \max(x,0)$ , careful initialization (Ben-gio & Glorot,2010;Saxe et al.,2013), and small

learning rates. If, however, we could ensure that the distribution of nonlinearity inputs remains more stable as the network trains, then the optimizer would be less likely to get stuck in the saturated regime, and the training would accelerate.

### Batch Normalization: Accelerating Deep Network Training by ...

Using mini-batches of examples, as opposed to one example at a time, is helpful in several ways. First, the gradient of the loss over a mini-batch is an estimate of the gradient over the training set, whose quality improves as the batch size increases. Second, computation over a batch can be much more efficient than  $m$  computations for individual
