Contemporary Perspectives on Research in Assessment and Evaluation in Early Childhood Education Olivia Saracho 2015-08-01 Researchers, educators, professional organizations, administrators, parents, and policy makers have increased their involvement in the assessment and evaluation of early childhood education programs. This interest has developed swiftly during the last decades. The National Association for the Education of Young Children (NAEYC) and the National Association of Early Childhood Specialists in State Departments of Education (NAECS/SDE) developed a position statement titled, "Early childhood curriculum, assessment, and program evaluation: Building an effective, accountable system in programs for children birth through age 8," to address related trends, issues, guiding principles, and values. Appropriate and well-designed evaluations need to address several audiences including researchers, educators, policy makers, children, and parents. They need to encourage

the implementation of a strong foundation that improves the quality of the children's education. Child assessment and program evaluation can lead to effective results and better accountability for preschool, kindergarten, and primary school programs. The purpose of this volume is to share a collection of research strands on contemporary perspectives on research in assessment and evaluation in early childhood education. It provides a review and critical analysis of the literature on assessment and evaluation of programs, children, teachers, and settings. The volume begins with a brief introductory chapter that presents the reader with a map of the area, laying out the issues and alternatives, and linking these to the chapters that follow. It addresses several areas including (1) understanding assessment and evaluation with young children, (2) schools and assessment implications, (3) teacher evaluation and professional development, (4) social relationships and assessment, (5) content areas in early education assessment, (6) technology and assessment, and (7) conclusion with future research directions in assessment and evaluation in early childhood education. The volume is of interest to researchers, educators, policy makers, university faculty, graduate students, and general readers who are interested in research on assessment and evaluation in early childhood education. The chapters are authored by established scholars in the field.

Parenting Matters National Academies of Sciences, Engineering, and Medicine 2016-11-21 Decades of research have demonstrated that the parent-child dyad and the environment of the family—which includes all primary caregivers—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. *Parenting Matters* identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

Eager to Learn National Research Council 2001-01-22 Clearly babies come into the world remarkably receptive to its wonders. Their alertness to sights, sounds, and even abstract concepts makes them inquisitive explorers—and learners—every waking minute. Well before formal schooling begins, children's early experiences lay the foundations for their later social behavior, emotional regulation, and literacy. Yet, for a variety of reasons, far too little attention is given to the quality of these crucial years. Outmoded theories, outdated facts, and undersized budgets all play a part in the uneven quality of early childhood programs throughout our country. What will it take to provide better early education and care for our children between the ages of two and five? *Eager to Learn* explores this crucial question, synthesizing the newest research findings on how young children learn and the impact of early learning. Key discoveries in how young children learn are reviewed in language accessible to parents as well as educators: findings about the interplay of biology and environment, variations in learning among individuals and children from different social and economic groups, and the importance of health, safety, nutrition and interpersonal

warmth to early learning. Perhaps most significant, the book documents how very early in life learning really begins. Valuable conclusions and recommendations are presented in the areas of the teacher-child relationship, the organization and content of curriculum, meeting the needs of those children most at risk of school failure, teacher preparation, assessment of teaching and learning, and more. The book discusses: Evidence for competing theories, models, and approaches in the field and a hard look at some day-to-day practices and activities generally used in preschool. The role of the teacher, the importance of peer interactions, and other relationships in the child's life. Learning needs of minority children, children with disabilities, and other special groups. Approaches to assessing young children's learning for the purposes of policy decisions, diagnosis of educational difficulties, and instructional planning. Preparation and continuing development of teachers. Eager to Learn presents a comprehensive, coherent picture of early childhood learning, along with a clear path toward improving this important stage of life for all children.

Observing Development of the Young Child Janice J. Beaty 2010 "How can we tell where children stand in their physical, cognitive, socioemotional, language, and creative development? Do we test them? Measure them? Compare them?" This textbook teaches students how to become observers and how to document their findings using one tool: The Child Development Checklist. The author posits that the best method to determine a child's strengths is for the teacher to observe the young child in the regular classroom based on a particular set of criteria. The reasons for assessing children in this manner are: It allows students of child development to gain an in-depth understanding of real children and their sequences of growth. It helps teachers of young children to become aware of each child's growth and to support individual development with appropriate activities and materials. Once the child's strengths have been assessed, the book then provides suitable lesson plans and activities to support the child's development. New To This Edition: NEW! Presents new information on how to become an observer--How to get started, when and how long to observe, what to look for in children, and how to record. This is critical for new students and teachers. (See Chapter 1 Ex. p. 9, 11, 12) NEW! Suggests alternative approaches to child assessment--These include visual documentation, i.e. art, photos, videos, and using documentation panels. This is important for evaluating both children and program. (See Chapter 1 Ex. pp 23-26). NEW! Offers new information on self-esteem in young children--Explains how and why a child should develop a secure attachment relationship with a teacher. Sets the stage for child's success. (See Chapter 3 Ex. pp 81-82). NEW! Includes new research on the brain showing the importance of physical exercise for children--The research shows that exercises increases brain synapses that improve permanent memory development. Even clapping helps. (See Chapter 6, Ex.p.267)

Routledge International Handbook of Social Psychology of the Classroom Christine M. Rubie-Davies 2015-05-22 The Routledge International Handbook of Social Psychology of the Classroom presents the first comprehensive and integrated compilation of theory and research on topics related to the social cohesion of the classroom. Many of these topics have been studied independently; for example, motivation, self-concept, class management, class climate, and teacher expectations are generally studied separately by different groups of researchers. This handbook brings the evidence from different fields in social psychological classroom research together in one place for the first time to explore how these topics relate and how each factor influences students and their learning. With chapters by established international leaders in their fields, as well as emerging new talent, this handbook offers cutting edge research and surveys the state of the art in the social psychology of the classroom. Major areas covered include: Motivation Belief, self-concept, and personality Emotional engagement Teacher-student relationships Teacher expectation Classroom management Culture and identity The Routledge International Handbook of Social Psychology of the Classroom provides a review of current theories related to the social psychology of the classroom, including how these theories apply to classrooms and learners. Current evidence clearly shows that areas explored by social psychology - and brought together for the first time in this volume - can have a very significant impact on

classroom learning and student achievement (J. Hattie, *Visible Learning: A Synthesis of over 800 Meta-Analyses Relating to Achievement*, Routledge 2009). This handbook is a must for all academics whose research relates to the social psychology of the classroom. It is also an invaluable resource for teachers and teacher education students who want to understand why they are effective instructors and yet still encounter students in their classes who are not responding as expected.

Together, they have written a book that will serve as a professional development tool as well as a kidwatching handbook. In each chapter, they provide a clear description of how kidwatching enhances teaching and learning specific guidelines and suggestions for kidwatching practical tools and resources to be used in documentation and analysis empowerment for children—a chance to evaluate and revalue themselves by partnering with teachers to document and reflect on their knowledge. Kidwatching provides a framework for engaging in systematic, yet very personalized, data collection in all areas of literacy. Transforming the Workforce for Children Birth Through Age 8 National Research Council 2015-07-23 Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. *Transforming the Workforce for Children Birth Through Age 8* explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. *Transforming the Workforce for Children Birth Through Age 8* offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.
