Creating Sustainable Careers in Student Affairs Jeffrey W. Sallee 2020-12-28 This book argues that the current structure of student affairs work is not sustainable, as it depends on the notion that employees are available to work non-stop without any outside responsibilities, that is, the ideal worker. The field places inordinate burdens on staff to respond to the needs of students, often at the expense of their own families and well-being. Professionals can meet the needs of their students without being overworked. The problem, however, is that ideal worker norms pervade higher education and student affairs work, thus providing little incentive for institutions to change. The authors in this book use ideal worker norms in conjunction with theories to interrogate the impact on student affairs staff across functional areas, institutional types, career stage, and identity groups. The book is divided into three sections; chapters in the first section of the book examine various facets of the structure of work in student affairs, including the impact of institutional type and different functional areas on employees' work-lives. Chapters in the second section examine the personal toll that work in student affairs can take, including emotional labor's impact on well-being. The final section of the book narrows the focus to explore how different identities, including mothers, fathers, and people of color, navigate work/life issues. Challenging ideal worker norms, all chapters offer implications for both individuals and institutions.

Career Development and Systems Theory Wendy Patton 2014-05-12 Career Development and Systems Theory: Connecting Theory and Practice offers practitioners, researchers and students a comprehensive introduction to, and overview of, career theory; introduces the Systems Theory Framework for career development; and demonstrates its considerable contemporary and innovative application to practice. A number of authors have identified this framework as one of a small number of significant innovations in the career development literature. The Systems Theory Framework of career development was developed to provide coherence to the career development field by providing a comprehensive conceptualisation of the many existing theoretical concepts relevant to understanding career development. It is not designed to be a theory of career development; rather systems theory is the basis for an overarching, or metatheoretical, framework within which all concepts of career development, described in the plethora of career theories, can be usefully positioned and utilised in both theory and practice. It has been applied to the career development of children, adolescents and young adults. Since its first publication, the Systems Theory Framework has been the basis of numerous publications focusing on theoretical application and integration into practice and research, with a growing number of these by authors other than the framework developers. Its application across cultures also has been explored. The theoretical and practical unity of the Systems Theory Framework makes this book a worthy addition to the professional libraries of practitioners, researchers and students, new to, or experienced in, the field of career development.

Vocational Identity and Career Construction in Education J. Tuncer 2018-12-14 Over the years, careers have transformed to be flexible and changeable rather than stable, life-long commitments to an organization. As such, making work meaningful, controlling the work environment, and taking advantage of opportunity to get required training for the next job are as important as the financial advantages. Educators' careers cannot be isolated from the labor market, and these developments are expected to influence the career decisions of educators. Vocational Identity and Career Construction uses career construction theory to investigate objective factors influencing career choices and paths of educators, including factors influencing personality development, career counseling activities, transition from school to work, adaptation to different work environments, and meaning for educators.
