Diary Methods Lauri L. Hyers 2017-12-01 Qualitative diary research is a unique tool with strengths that set it apart from other research methods. The diary prioritizes events embedded in context and time, a perspective that serves to destabilize constants, revealing the complex intersectionality of experience. Over the last several centuries, the mechanics of diary-keeping have evolved from simple records of ephemera into a primary research method. Today both archival and solicited diaries are used by social scientists who employ a range of qualitative, quantitative, and mixed-method data collection technologies. Researchers may consider the very possibility of conducting a qualitative diary study with some hesitation--in addition to sounding like a good deal of work, the method seems somewhat off the beaten path, a bit mysterious, and even kitschy. With a better understanding of what is involved, those who are considering the method may come to find that a diary study is well worth their while. In *Diary Methods*, Hyers provides her readers with a wealth of guidance and expert insight to ensure the success of their qualitative diary studies. The history of the diary from cultural phenomenon to social scientific method are explored, followed by a discussion of the use of archival and solicited diaries in qualitative designs, diary data collection and management, qualitative analysis and coding, composition and diary report writing, evaluating diary research, and special ethical considerations when using diaries in research.

How to Write a Phenomenological Dissertation Katarzyna Peoples 2020-02-07 Conducting phenomenological research for dissertations can be an involved and challenging process, and writing it up is often the most challenging part. *How to Write a Phenomenological Dissertation* gives students practical, applied advice on how to structure and develop each chapter of the dissertation specifically for phenomenological research. Phenomenology is about personal experience and personal experience varies from researcher to researcher. However, this variation is a big source of confusion for new researchers in the social, behavioral, or health sciences. This brief text is written in a simple, step-by-step fashion to account for this flexibility and variation while also providing structure necessary for a successful dissertation. Broken up into chapters that follow each chapter of the dissertation, this text logically addresses the various parts of phenomenological research, starting with ensuring phenomenology is the right method for your research, writing the literature review, going through methods and results sections to analysis and discussion. The author, using experience gleaned from supervising phenomenological dissertations for many years, gives time-tested advice on how structure the dissertation to fit into more common frameworks, using checklists and tables throughout. Each chapter includes a list of helpful resources for students to use alongside this book with specific information on methods and research. Unique to this text is a chapter on creating your own phenomenological method which allows students to expand their viewpoints and experiment in future studies after the dissertation.

Spirituality and Childbirth Susan Crowther 2017-09-13 Highlighting aspects of birth often taken for granted, ignored or left silenced, this book questions the art and meaning of childbirth. Addressing spirituality in and around the start of life from a variety of thought-provoking perspectives, it examines the apparent paradox of impersonal biomedical-technocratic systems operating alongside the meaningful experiences encountered by those involved. Themes covered include: Notions of holism and spirituality, culture, religion and spirituality Childbirth significance at societal level Spiritual care in maternity care provision Birth environment, mood, space and place Spiritual experience of all those involved, including health professionals Spiritual experience when birth is complex and challenging When birth and death are juxtaposed. Although there is considerable literature on spirituality at the end of life, this is the only book that draws together a global and multidisciplinary selection of academic researchers and practitioners to reflect on spirituality at the start of life. Each chapter explores the relevant theoretical background and makes links to practice, using case studies from research and practice. The chapters conclude by discussing: how spiritual care is, and should be, provided in this context; what practice approaches are beneficial; cross-cultural perspectives; and future directions for research. It is an important read for all those interested in childbirth, maternity care, social science perspectives on health and illness, and spirituality.

Heidegger and the Lived Experience of Being a University Educator Joshua Spier 2018-02-09 This book explores the lived meanings of being a university educator from an existential perspective. The book enriches our understanding of educators' experiences in light of Martin Heidegger's early philosophy, and vice versa (opening our understanding of Heidegger's philosophy through educators' experiences). Also drawing on the philosophical insights of Hans-Georg Gadamer, the book situates the purposes and experiences of the 'educator' in historical and contemporary contexts. In doing so, the author reveals that being a university educator is essentially characterised by conversation and time. Inspired by the author's own experiences of teaching community development and sociology within a youth-work specific bachelor degree, the book invites educators to apply existential philosophy as a tool to reflect upon their own experiences and to reconnect with the question of what it means to be an educator in their shared world of practice. This thoughtful volume is sure to resonate with the experiences of readers who educate within a university context.

Joy at Birth Susan Crowther 2019-09-02 To be at the birth of a baby is special, yet there is an increasing secularisation and reliance on technology in contemporary maternity care, particularly in the western context. Through exploration of experiences at birth this book explores joy at birth, which is often ignored and overlooked beyond the activities that help to ensure survival. This book draws on a collection of stories of birth from mothers, birth partners, obstetricians and midwives, that demonstrate joy at birth across professional groups and in different types of births and locations with or without technological interventions. Each chapter introduces stories of joy that highlight embodied, spatial and relational meanings. Employing the Heideggerian notion of a human being, it sketches out an ontological focus that draws our gaze to the everyday taken-for-granted ways of being at birth. Based on phenomenological experiential data and rigorous interpretive analysis underpinned by seminal philosophical writings, this book calls for readers to attend to the wholeness of birth in all situations and at all births in ways not attempted before. It will be of great interest to midwives, and those working in and studying maternity, obstetrics and neonatology, as well as social and medical anthropology, sociology, cultural, organisational and clinical psychology and spirituality.

A Companion to Simone de Beauvoir Laura Hengehold 2017-07-27 The work of Simone de Beauvoir has endured and flowered in the last two decades, thanks primarily to the lasting influence of *The Second Sex* on the rise of academic discussions of gender, sexuality, and old age. Now, in this new Companion dedicated to her life and writings, an international assembly of prominent scholars, essayists, and leading interpreters reflect upon the range of Beauvoir's contribution to philosophy as one of the great authors, thinkers, and public intellectuals of the twentieth century. The Companion examines Beauvoir's rich intellectual life from a variety of angles—including literary, historical, and anthropological perspectives—and situates her in relation to her forbears and contemporaries in the philosophical canon. Essays in each of four thematic sections reveal the breadth and acuity of her insight, from the significance of *The Second Sex* and her work on the metaphysics of gender to her plentiful contributions in ethics and political philosophy. Later chapters trace the relationship between Beauvoir's philosophical and literary work and open up her scholarship to global issues, questions of race, and the legacy of colonialism and sexism. The volume concludes by considering her impact on contemporary feminist thought writ large, and features pioneering work from a new generation of Beauvoir scholars. Ambitious and unprecedented in scope, *A Companion to Simone de Beauvoir* is an accessible and interdisciplinary resource for students, teachers, and researchers across the humanities and social sciences.

The Maternal Tug: Ambivalence, Identity, and Agency Adams Sarah LaChance 2020-02-01 While the existence of maternal ambivalence has been evident for centuries, it has only recently been recognized as central to the lived experience of mothering. This accessible, yet intellectually rigorous, interdisciplinary collection demonstrates its presence and meaning in relation to numerous topics such as pregnancy, birth, Caesarean sections, sleep, self-estrangement, helicopter parenting, poverty, environmental degradation, depression, anxiety, queer mothering, disability, neglect, filicide and war rape. Its authors deny the assumption that mothers who experience ambivalence are bad, evil, unnatural, or insane. Moreover, historical records and cross-cultural narratives indicate that maternal ambivalence appears in a wide range of circumstances; but that it becomes unmanageable in circumstances of inequity, deprivation and violence. From this premise, the authors in this collection raise imperative ethical, social, and political questions, suggesting possibilities for vital cultural transformations. These candid explorations demand we rethink our basic assumptions about how mothering is experienced in everyday life.

Feeling and Personhood John Heron 1992-06-25 John Heron presents a radical new theory of the person in which "feeling," differentiated from emotion, becomes the distinctive feature of personhood. The book explores the applications of Heron's ideas to living and learning and includes numerous experiential exercises. Central to Heron's analysis are interrelationships between four basic psychological modes - affective, imaginal, conceptual and practical. In particular, feeling is seen as the ground and potential from which all other aspects of the psyche emerge - emotion, intuition, imaging of all kinds, reason, discrimination, intention and action. The author also shows the fundamental relation of his ideas to theory and practice in transpersonal psychology and philosophy, and examines the implications

of his theory for understanding and enhancing both formal and life learning.

Fathering in India Rajalakshmi Sriram 2018-12-30 This book covers the underexplored subject of 'fathering' in India. It delves into the shared aspirations of men in India to nurture their children in sensitively attuned ways within the culturally prescriptive context that governs men's roles as providers and caregivers. This work is based on over two decades of intensive research in India on how different groups construct and experience fatherhood and fathering under changing circumstances. It unmasks the heterogeneity that exists within fathering in India through conversations with fathers across diverse contexts—in privileged economic situations and those in difficult home and family circumstances, having children with disability, single-parent fathers and fathers in the military. A separate section discusses fathering daughters and shared parenting. Images and role models in fathering are brought alive through analysis of Hindi films, the media, children's literature and classical literature. The conceptual analysis moves beyond the power and control dimensions commonly used to describe Indian men and fathers, to highlight their resilience, adaptability, positive involvement and developmental trajectories. This volume is for scholars, researchers and practitioners in developmental psychology, human development and family science, sociology, early childhood education and psychiatry, pediatrics, community medicine and allied fields.

Introducing the Social Sciences for Midwifery Practice Patricia Lindsay 2015-07-16 Introducing the Social Sciences for Midwifery Practice makes clear the links between social, anthropological and psychological concepts, midwifery practice and women's experience of birth. Demonstrating how empathising with women and understanding the context in which they live can affect childbirth outcomes and experiences, this evidence-based text emphasises the importance of compassionate and humane care in midwifery practice. Exploring midwifery as an art, as well as a science, the authors collected here make the case for midwives as professionals working 'with women' rather than as birth technicians, taking a purely competency-based approach to practice. The book incorporates a range of pedagogical features to enhance student learning, including overall chapter aims and learning outcomes, 'recommendations for practice', 'learning triggers' to encourage the reader to delve deeper and reflect on practice, 'application to practice' case studies which ensure that the theory is related to contemporary practice, and a glossary of terms. Nursing and Midwifery Research Dean Whitehead 2012-10-31 The new edition upholds the premise that knowledge about research process and design is mandatory in today's health care arena, and that all nurses and midwives need to understand research findings and their implication for changing practice. It is completely revised with many new chapters. The text has been restructured into three sections. Section 1 Research Awareness sets the scene for the importance of nursing and midwifery research and provides an overview of research theory and practice as processes. Chapters on searching for and reviewing the literature provide detailed advice for undergraduates and facilitate access to research articles online. One of the new chapters discusses ethical issues in Australia and New Zealand. Section 2 Appreciation and Application provides a detailed discussion of qualitative, quantitative and mixed methods research approaches with many useful examples from the clinical area. Section 3 Conducting primary research is new and is designed to accommodate both undergraduate and postgraduate students in their research effort. Writing research proposals may be a requirement for undergraduates in their research program and postgraduates will find the information useful for undertaking a higher degree or applying for university or external funding. This final Section is also useful as a guide on disseminating and publishing conducted research findings. Combined Australian and New Zealand editorship ensures greater trans-Tasman coverage, awareness and relevance. Contributions from international luminaries are balanced by a heightened focus on research conducted within Australia and New Zealand. New edition conscientiously recognises midwifery research as related to but independent from nursing. The research process-driven approach is directed towards 'consumers' of research, and the comprehensive coverage extends from undergraduate through to a postgraduate level of knowledge. Expanded pedagogy includes Key Terms and Learning Outcomes at the beginning of each chapter; Icons throughout that direct readers to web-based material; Evidence-based Tips, Research in Brief boxes and Points to Ponder for constant reinforcement that links evidence to practice. Integrated Tutorial Triggers with suggested answers provided and Multiple Choice Questions enable students to assess their understanding of key points. Evolve Website provides True/False questions and access to journal articles cited in the text, with additional reflective questions. Australian adaptation of Nursing Research: Lobiondo-Wood & Haber

Health Promotion in Health Care - Vital Theories and Research Gørill Haugan 2021-03-11 This open access textbook represents a vital contribution to global health education, offering insights into health promotion as part of patient care for bachelor's and master's students in health care (nurses, occupational therapists, physiotherapists, radiotherapists, social care workers etc.) as well as health care professionals, and providing an overview of the field of health science and health promotion for PhD students and researchers. Written by leading experts from seven countries in Europe, America, Africa and Asia, it first discusses the theory of health promotion and vital concepts. It then presents updated evidence-based health promotion approaches in different populations (people with chronic diseases, cancer, heart failure, dementia, mental disorders, long-term ICU patients, elderly individuals, families with newborn babies, palliative care patients) and examines different health promotion approaches integrated into primary care services. This edited scientific anthology provides much-needed knowledge, translating research into guidelines for practice. Today's medical approaches are highly developed; however, patients are human beings with a wholeness of body-mind-spirit. As such, providing high-quality and effective health care requires a holistic physical-psychological-social-spiritual model of health care is required. A great number of patients, both in hospitals and in primary health care, suffer from the lack of a holistic oriented health approach: Their condition is treated, but they feel scared, helpless and lonely. Health promotion focuses on improving people's health in spite of illnesses. Accordingly, health care that supports/promotes patients' health by identifying their health resources will result in better patient outcomes: shorter hospital stays, less re-hospitalization, being better able to cope at home and improved well-being, which in turn lead to lower health-care costs. This scientific anthology is the first of its kind, in that it connects health promotion with the salutogenic theory of health throughout the chapters. The authors here expand the understanding of health promotion beyond health protection and disease prevention. The book focuses on describing and explaining salutogenesis as an umbrella concept, not only as the key concept of sense of coherence.

Towards the Humanisation of Birth Elizabeth Newnham 2018-02-13 This book examines the future of birthing practices,

particularly by focusing on epidural analgesia in childbirth. It describes historical and cultural trajectories that have shaped the way in which birth is understood in Western, developed nations. In setting out the nature of epidural history, knowledge and practice, the book delves into related birth practices within the hospital setting. By critically examining these practices, which are embedded in a scientific discourse that rationalises and relies upon technology use, the authors argue that epidural analgesia has been positioned as a safe technology in contemporary maternity culture, despite it carrying particular risks. In examining alternative research the book proposes that increasing epidural rates are not only due to greater pain relief requirements or access but are influenced by technocratic values and a fragmented maternity system. The authors outline the way in which this epidural discourse influences how information is presented to women and how this affects their choices around the use of pain relief in labour.

This book provides an evidence-based source for all midwives and other health professionals with an interest in normal birth. Explores the wider range of normal childbirth that is unique to individual mothers and babies Challenges the assumptions underpinning current beliefs and attitudes Updated statistics, both national and international Latest research and debate

Women's Health in Africa Chimaraoke O. Izugbara 2017-10-02 This edited book includes new policy-relevant research on women's health issues in Africa. Scholars explore critical topics from different disciplinary traditions using a variety of research methodologies and data sources. The contributors include African scholars with in-depth knowledge of their home contexts, who can furnish nuanced interpretations of local health issues and trends; international researchers who bring vigorous comparative viewpoints; emerging scholars adding to scientific knowledge; and more established researchers with a deep global knowledge of women's health issues. The range of women's health issues is vast, including the HIV epidemic and its impacts; domestic violence; the persistence of homebirths; and abortion. In addition, the book investigates emerging health concerns such as CVDs and cancers. Readers will learn that, while old health issues have persisted and assumed new dimensions, newer concerns have materialized and are gaining momentum. The inability of health systems to tackle these issues complicates matters in Africa, creating a sense of desperation that can only be successfully confronted through strong political will and strategic planning, grounded in further research. This book was originally published as several special issues of *Health Care for Women International*.

Traumatic Childbirth Cheryl Tatano Beck 2013-07-18 Postpartum depression has become a more recognized mental illness over the past decade as a result of education and increased awareness. Traumatic childbirth, however, is still often overlooked, resulting in a scarcity of information for health professionals. This is in spite of up to 34% of new mothers reporting experiencing a traumatic childbirth and prevalence rates rising for high risk mothers, such as those who experience stillbirth or who had very low birth weight infants. This ground-breaking book brings together an academic, a clinician and a birth trauma activist. Each chapter discusses current research, women's stories, the common themes in the stories and the implications of these for practice, clinical case studies and a clinician's insights and recommendations for care. Topics covered include: mothers' perspectives, fathers' perspectives, the impact on breastfeeding, the impact on subsequent births, PTSD after childbirth and EMDR treatment for PTSD. This book is a valuable resource for health professionals who come into contact with new mothers, providing the most current and accurate information on traumatic childbirth. It also presents mothers' experiences in a manner that is accessible to women, their partners, and families.
